## Magnum Wet-3801

**Brett Young**<sup>TM</sup>  
75 YEARS  
1934-2009

### Introduction:

Magnum 3801 - Wet is a new variety from the WET Trait line-up. It is an improved variety developed by Dairyland Seed, the breeder of the first hybrid alfalfa released in North America. Magnum 3801-Wet tolerates soils that remain wet for extended periods of time. It has branched, floating roots that keep the majority of the roots above fluctuating water tables. University research shows that branch rooted alfalfas perform better in heavy ground than tap rooted cultivars. This variety possesses excellent winterhardiness and displays a disease resistance package unsurpassed in the alfalfa seed industry. These strong traits result in extended persistence of the stand, increased yield and improved overall performance.

FEATURES	
Maturity	Medium
Winterhardiness	1.9
Fall Dormancy	3.0
Regrowth	Excellent
Root Type	Tap/Branch
Disease Resistance Index	27
Phytophthora Root Rot	HR
Bacterial Wilt	HR
Fusarium Wilt	HR
Verticillium Wilt	R

Magnum 3801 - Wet offers a solution to producers looking for an alfalfa variety that will perform on soils with a high water table or soils with a shallow hardpan. It also offers excellent yield potential with unsurpassed regrowth. With strong winterhardiness and a second to none disease package, this variety is a great fit for any field. Magnum 3801-Wet mixes well with timothy, orchardgrass, bromegrass and other grasses to meet specific area needs.
