

PENNCROSS

CREEPING BENTGRASS

- Very forgiving
- Wide range of adaptability
- Aggressive lateral growth

Oregon's most experienced growers produce Penncross to standards higher than general certified standards.

These are:

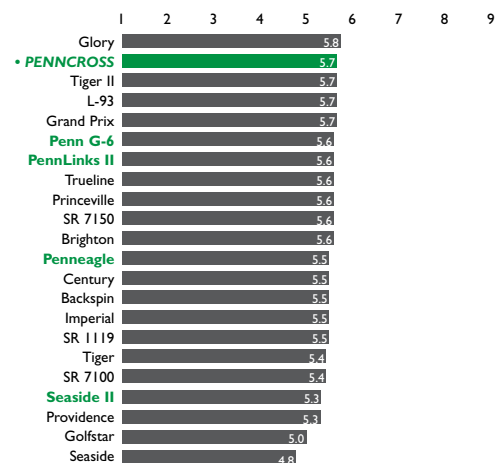

Pure Seed	97%	minimum
Other Crop	1.00%	maximum
Weed Seed	0.10%	maximum
Inert Matter	2.00%	maximum
Germination	80%	minimum

Free of *Poa annua*, *Poa trivialis*, and all other noxious and objectionable weed seeds.

Penncross has set the bentgrass standard since 1955. It has a medium green coloration and has rapid establishment. It is known for its aggressive, lateral growth habit, and wide range of adaptability. Penncross has excellent resistance to dollar spot as well as other diseases. The high seed count (over 6,000,000 seeds per pound) allows for lower seeding rate: 1.5 lbs/1,000 sq ft for new plantings and 0.1 to 0.25 lbs/1,000 sq ft for interseeding. If maintained properly, Penncross will provide an excellent playing surface for greens, tees, and fairways.

1999–2002 mean turfgrass quality ratings for entries in the National Bentgrass Trial for bentgrass cultivars grown on a fairway or tee and maintained at 5/8 inch mowing height.

Turfgrass Quality 1-9 • 9 = Ideal turf

Green = Tee-2-Green Varieties
