

For many years we have offered our customers the practical, well priced, high quality built T.I.P. (Turf Improvement Products) line of equipment. From the ever popular and industry leading T.I.P. Groom-It Brush for even distribution of sand in any topdressing situation, the 48" SW-48 Sweep-n-Clean, the Brush-It for those who must absolutely fill every hole to perfection and finally the "New" T.I.P. MARS Sweeper, lightweight, yet very durable and will handle anything from leaves to cores.

The New **T.I.P. MARS Sweeper** is lighter than its predecessor, the SW-48. The MARS has a smaller holding capacity than the SW-48, while still utilizing the same incredible 48" pick-up system and with it's independent lightweight design can be pulled by just about anything.

The standard of the industry, the **T.I.P. Spiker/Seeder** is 48" wide. It improves water usage, makes over-seeding an easy job, creates the environment for higher germination rates, and relieves surface compaction for more efficient gas exchange and better water reception. Best built in the business!

The Original **T.I.P. Groom-It Brush** is the most effective method to brush sand into aeration holes. Shown here brushing the base layer sand during an artificial surface installation with stiffer synthetic brush set-up. This step is followed by adding one inch of crumb rubber.

The Groom-It options make it flexible to use, whether on greens, fairways, sports fields or installation and maintenance of synthetic turf, the T.I.P. **Groom-It Brush is simply the best.**

The **SW-48 Sweep-n-Clean** is the ideal piece of equipment to pick-up divots, cores, verticut clippings, grass clippings, pine needles, leaves, acorns, animal droppings, litter, loose debris and is as well ideal for parking lots.

The **Brush-It** is built to perfectly fill aeration holes quicker, windrow aeration plugs for pick-up and reduce sand usage. Can be pulled as a single unit or in tandem.
