

Cadence[®] Fungicide

Dollar Spot

BASF

The Chemical Company

Cadence

- Proven, preventative dollar spot control
- Alternative mode of action for rotation
- Cost effective
- Convenient packaging

Why choosing Cadence makes sense

Cadence's mode of action provides superintendents with industry-leading dollar spot prevention as well as an effective tool for resistance management.

Cadence's convenient packaging makes mixing and loading easier which saves time when you have little to spare.

How Cadence works

Cadence prevents dollar spot infection by disrupting the fungal cells' ability to generate energy.

Cadence protects the entire leaf with upwardly systemic and translaminar movement in the plant and is rainfast in just one hour.

How to apply Cadence

Rate:

Apply Cadence at 3.2-5.6g/100m² (320-560g/ha) in 5 – 15L of water/100m² on a 14-28 day interval. Do not apply more than two sequential applications of Cadence. Up to 2.4Kg/ha of Cadence can be applied per year.

Cadence First (Spring)

Apply Cadence preventatively approximately two weeks before dollar spot symptoms typically appear, generally after the second or third true fairway mowing.

Summer:

Cadence can be applied preventatively throughout the summer, even during high- stress periods. Cadence is also a cost- effective tank-mix partner providing excellent residual dollar spot control.

Cadence Last (Fall)

Apply as a fall clean-up from September through mid-October to protect fairways from fall dollar spot pressure and to reduce the over- wintering inoculum which will help to delay spring dollar spot development.

Technical Information

Fungicide Group: 7

Active Ingredient: Boscalid

Rainfast: 1 hour

Formulation: Wettable Granule

Packaging: 3 x 162 g per case

ALWAYS READ AND FOLLOW LABEL DIRECTIONS
